this book examines how humans evolved from the cosmos and prebiotic earth and what types of biological chemical and physical sciences drove this complex process the author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content first in genes and then in brains

this work was created from the statement but all you have to do is make the robot recognize its surroundings salamanders do it and how

complex are they little did we know what a long path was started with those simple words this book is a small step on that path which we hope leads to robots that can serve as true and useful assistants to humans at the least we hope for some help with the tasks that are described by the 3 d words dull dirty or dangerous fair warning this work is a synthesis of ideas from many disciplines as such we have depended on the work of many other researchers and philosophers the heart of this work the lens model comes from the work of egon brunswik even though he died in the 1950 s his ideas are still strong enough to resonate into the 2000 s and into our robot another researcher who s work has greatly in uenced this work is walter freeman professor emeritus of neurobiology at the university of california berkeley we have relied heavily on his work on preaference and attention to guide the development of our robot in addition we have used research from a myriad of different elds our huge thanks to all the researchers who s work we used to synthesize this new theory denver co louise f gunderson july 2008 james p
